

Emissions Control Services

TEAM[®]

Keeping Facilities Compliant

With Comprehensive Emissions Control Programs

Emissions control is essential for industry to meet environmental regulatory requirements. Facilities must understand the specific regulations that apply to their operation and proactively chart an action plan that includes compliance monitoring, auditing and enforcement.

Based on EPA statistics, the average-sized facility may have 3,000 to 30,000 individual components that require monitoring. With these thousands of components to identify, tag and monitor in any given facility, it is vital that the emission control process is efficient and accurate.

At TEAM Industrial Services, we evaluate your emissions control efforts and offer the guidance and services necessary to streamline your processes and management. We were the very first company to perform Leak Detection and Repair (LDAR) inspection. We were also one of the first contractors to offer Optical Gas Imaging for leak detection, using the revolutionary FLIR GasFindIR™ camera.

Our breadth of knowledge and experience in the field enables us to provide comprehensive, cost effective solutions for environmental compliance obligations throughout a facility's life cycle.

EMISSIONS CONTROL SERVICES

- + Leak Detection and Repair
- + Emissions Monitoring & Data Collection
- + Advanced QA/QC Processes
- + Greenhouse Gas Control
- + EPA Method 21

TEAM Can Assist You Team With:

- + Regulatory Applicability
- + Stream Applicability
- + Locating, Flagging, Tagging and Identifying Equipment
- + Method 21 Monitoring/Leak Identification
- + First, Second, Advanced Repairs
- + Data Administration
- + QA/QC Programs and Manual
- + LDAR Compliance Field Assessments
- + Automated Compliance Alerts

We design and implement Emissions Control programs tailored to your specific requirements. Whether you need skilled labor to supplement an existing program or want to develop a comprehensive program from scratch, Team is here to meet your every need.

With an in-house staff of professional engineers, project managers, and field technicians and a full complement of

TEAM strictly adheres to all national and local emission control codes, regulations, guidelines and specifications.

environmental technology and equipment, we can respond immediately to detect and repair leaking equipment. Each of our technicians is highly trained, certified and experienced working in conjunction with EH&S personnel on both large scale and small-scale projects.

Annual safety and technical certification for our technicians include:

- + LDAR regulatory policies and procedures
- + Component identification, tagging and record keeping
- + Component specific monitoring procedures
- + First attempt and advanced repairs
- + General plant and process safety programs
- + QA/QC procedures
- + Auditing procedures

Advantages of TEAM Emission Control Services:

- + Encompasses all aspects of LDAR including inventory assessment, monitoring, repair, data management, and auditing to assure your equipment is in compliance with all applicable federal and state LDAR regulations
- + Provides verifiable safety, quality and audit programs
- + Offers VOC repair services for process equipment
- + Utilizes advanced monitoring technology and software
- + Enables quick response with access to more than 400 highly trained and fully certified LDAR personnel
- + Provides proprietary automated compliance alerting and tracking system

TEAM experts are available 24 hours a day, 7 days a week, 365 days a year.
